

HAIR SPA Ellie Frankie.

TREATMENTS

NANOPLASTY

Nanoplasty is an advanced semi-permanent hair straightening and smoothing treatment that uses nano-sized particles and amino acids to deeply penetrate the hair shaft, repairing damage and altering its structure for a smoother, straighter appearance.

From \$500

KERATIN

Keratin is semi-permanent hair smoothing treatment that uses keratin (a natural protein found in hair) combined with other chemicals to make hair straighter, shinier, and easier to manage by reducing frizz and smoothing the hair cuticle.

From \$250

REBUILDING

Biomimetic Phytoprotein is a rebuilding treatment that repairs and returns body and texture to damaged and weakened hair. The process rebuilds damaged hair caused by repeated chemical treatments, mechanical stresses, environmental aggressions and thermal instruments. This serum repairs the keratin chains inside the hair fibre, supplying amino acids to hair cuticle and cortex.

From \$95

K18

K18 is a peptide designed to penetrate into the hairs inner layers to repair damage at a molecular level, reconnecting broken polypeptide chains and disulfide bonds that are damaged by things like bleaching, colouring and heat styling.
